

RFP-013: Small Retail Inventory Control

Client: Cornerline Home Goods

Company Background • Cornerline Home Goods runs one small retail store and one storage room for back stock. • The owner wants better control of inventory movement without a full retail ERP.	Current Situation • Stock counts are updated manually at the end of the week. • Popular products often run out before staff notice the need to reorder.
Business Problem • Inventory inaccuracies lead to lost sales and rushed purchasing decisions. • Management cannot clearly see fast-moving items or low-stock conditions.	Desired Outcome • A system for item records, stock movements, current quantities, and reorder alerts. • A straightforward dashboard for low inventory visibility.
Constraints • The project should focus on internal stock control, not full point-of-sale replacement. • Supplier integrations and barcode hardware are optional future ideas only.	Deliverables Expected • Inventory control application • Stock adjustment and movement history • Low-stock report and user guide
Suggested User Roles • Store staff • Store manager • Owner	Suggested MVP Scope • Item catalog and quantity tracking • Stock-in and stock-out transactions • Low-stock alerts inside the application
Out-of-Scope Warning • Do not build accounting, e-commerce, or full POS capabilities. • Avoid complex purchasing automation.	

RFP-013 Planning Notes

How To Use This RFP

- Start by restating the business problem in your own words.
- Define a small MVP that solves the core workflow end to end.
- Track assumptions, risks, and stakeholder questions before implementation starts.
